Ask the Motor Medics®

Automotive Advice from The Under the Hood® Show

Dear Motor Medics,

I have a 1994 Stealth RT without the turbocharged engine. I have gone through 2 new batteries in a short period of time. Is it possible that a failing alternator can ruin a battery? If so, I would like to know if there is a way to check if the alternator has actually failed. Are there specific testing methods that can be used to narrow the cause down? I listen to your show faithfully. Thanks for your time

Thank you, Karen in Fargo.

Dear Karen,

A failing alternator can ruin a battery in a short period of time. If it's overcharging or is draining current when off it will discharge the battery after it sits for extended periods. Even if it does not sit long enough to run completely down it can cause the battery to fail due to its heavy discharge/charge cycles.

To check the alternator, you need to have a charging system analysis done with a charging system tester. This will show the internal operation of the alternator, diodes, field, and ability to charge at idle and at higher rpm but will not show a drain. To find a drain they will need to perform is a current drain test. Most shops with this type of tool will also have an electronic battery testing tool. It is possible that you have had a run of bad luck with two bad batteries. It has happened to us in our shop before.

Take care, the Motor Medics.

Dear Motor Medics,

I drive a Ford F150 which I bought new in 2004. I have been hearing some news from other Ford owners in my area who have had some issues with cam phasers failing in their engines. My question is what should I be doing to give me the best chance of preventing this from happening to my engine? I drive the truck only a few miles to work every day and change the oil about every four months.

Thank you, Dean in Moberly Missouri.

Dear Dean,

The 5.4 has been used is hundreds of thousands of Fords without issue but a few have been known to develop issues with the cam phasers or lose just a bit of oil pressure which keeps the phasers from operating properly. Repairs involve phaser replacement or sometimes an entire engine. The best way to prevent this from happening is with routine oil changes. Ford recommends using their factory specified oil or something of better ratings and a Ford genuine filter. There are copies of this filter on the market so make sure you are getting the genuine Ford product. As for time intervals we would suggest changing the oil at three months. The short trips are harder on the oil and engine as the engine does not get up to operating temperature for a long enough period to completely burn off all traces of moisture in the oil which can result in sludge in the engine.

Take care, the Motor Medics.

Coming in tomorrow's
BRANDON VALLEY Journal

There was some "heavy lifting" going on at Brandon Valley High School on Saturday morning at the BVHS Powerlifting Meet. Tom A. Savage brings you the results from the meet in words and Wilma Kirkeby captured the action in photos.

Plus, we've got a load of Lynx wrestling and basketball action from the week.

A delegation of Brandonites, including the BV High and Middle School student councils, boarded buses bound for Pierre for the annual Brandon Day at the Legislature.

BVHS will add a new CTE course next fall. Find out more about the hands-on learning opportunity.

The *Brandon Valley Journal* begins a new series this week, "For the greater good." The series puts the spotlight on the local non-profits, and this week, the Brandon Lions Club is in the spotlight.

We also have the year-end numbers from the Brandon Police and will tell you about a BVHS senior's passion to bring back the school newspaper.

And there's a whole lot more news, sports and features. So, if you find yourself asking, "I wonder what's going on..." it's time to subscribe to the *Brandon Valley Journal*! Give us a call at (605) 582-9999 to subscribe today so you, too, can be in the know.
