Ask the Motor Medics®

Automotive Advice from The Under the Hood® Show

Dear Motor Medics,

I bought a new truck with a turbo engine, and it has a "wet" timing belt. I have had the truck for three years and it just passed 100k miles. I have been told that it would be a good idea to change it at this mileage. I was taken back a bit when my dealership suggested this as I didn't even know that my truck had a timing belt, more less a "wet" timing belt. I have owned several timing belt equipped cars in my lifetime but never one with a "wet" belt. I was told that it is a major operation to change it and that the engine is an interference engine and will be heavily damaged if it were to break. Can you explain how this belt differs from a regular timing belt and if I really should be looking at a replacement at this time?

Thank you, Darrin, in Hallsville Texas.

Dear Darrin,

We tell our listeners they should ask when they buy a vehicle if it has a timing belt or a chain so they know if they will need to be scheduling a maintenance budget for replacement. Wet belts are contained within the engines and are covered in oil as they run, which helps cool the belt. Some of these engines have the belt on the rear and require major operations to access them and that along with the expense to replace is how they differ.

Take care, the Motor Medics.

Dear Motor Medics,

Hi guys, My car has had a catalytic convertor fail. I first got the code a couple months back and had it read at AutoZone, and they cleared it, and it came back in two weeks. I bought a code reader and have been clearing it myself and it will stay off if I drive on the highway primarily more than the city. Do I need to replace it, or can I just keep driving it this way and clearing the codes?

Thank you, Tom, in Missouri Valley.

Dear Tom,

When a catalytic converter gives a code, and it stays off longer on the highway than the city it is usually a good indication that the unit has failed. The extra heat of highway driving helps keep it lit. It is not a guarantee though. Other things like oxygen sensors or a vacuum leak or any other sensor or engine condition can cause it too. Make sure that the engine is running in top shape before condemning a converter. If the car has not lost any power and does not have a flashing check engine light, then you could technically drive it, but service is advised. If it has low power, it means that it is getting plugged and that can cause a lot of other issues so replacing it is a must. Keep this in mind though. If the engine is burning oil or coolant it will damage a new convertor.

Take care, the Motor Medics.
