City of Brandon Residents

### FLUSHING NOTICE

The City of Brandon will be flushing water mains from Monday, May 23rd through mid-June 2022 or until flushing is complete.

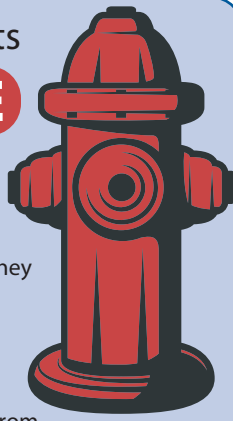

Flushing hydrants is needed to ensure they are in proper working condition for fire protection and to remove any mineral deposits that may have accumulated in the water mains.

Residents should be advised that the change in water flow patterns resulting from hydrant flushing may stir up mineral deposits in home services.

During hydrant flushing, it is not uncommon for residents to periodically experience discolored water, pressure change, and/or an increased chlorine odor. Homeowners are advised to exercise care in their laundry operations and to check the water for clarity before use.

Motorists also are advised to stay clear of the streams of water coming from the hydrants.

Rollie Hoeke • 605-582-2273  
Director of Public Works

## You're invited to THE Beauty PARLOUR RIBBON CUTTING

The celebration will take place  
WEDNESDAY JULY 6TH  
from 4:00pm - 5:00pm  
at 1400 E Cedar St, Brandon

Refreshments & dessert  
will be provided

# Ask the Motor Medics®

Automotive Advice from The Under the Hood® Show

Dear Motor Medics,  
I have a 2008 jeep compass and I purchased a simple Bluetooth system that I want to install in it. It's a standalone system that has an FM transmitter so I can play it over the radio. Well I was trying to install it and my original idea was to wire it to the fuse box with one of those add a circuit connectors until I found out that the fuse box is under the hood and not located under the dash. I want to splice it into the vehicle wiring with proper fuses of course but I need one wire that's always hot and one that's hot only when the ignition is on. Any advice will be greatly appreciated.

Thank you, Steve in Van Nuys California

Dear Steve,  
Many people find themselves wanting to add an accessory to their vehicle and nowhere to draw power from. The add a fuse kits you mentioned are one way to do it if the current draw is very low. The second would be to take power from the radio circuit. They have harnesses available to tap into the wires at many car stereo shops. The first thing you will need to do is find out how much current the device will use. Too much of a draw can damage the vehicle. Consulting with the folks at the stereo shop will help you to determine draw as it is something they often have to do.

Take care, the Motor Medics.

Dear Motor Medics,  
I'm a new listener and column reader and I have a 1993 Ford Ranger with a 4.0 engine. When I first start the engine the hydraulic valve lifters make a lot of noise. The lower the outdoor ambient temperature the worse the noise seems to be. When the engine reaches full operating temperature the noise goes away. Could this be an issue with the engine oil passages being gummed up? If this was the issue do you recommend a product that could clean it up?

Thank you, John in Rapid City South Dakota

Dear John,  
Many of the Rangers with the 4.0 engine develop this noise. Some are caused by lifters that are gummed up while others have excessive valve train wear cause by either high miles or lack of proper lubrication due to long oil change intervals or the use of lesser quality oils at some point. Without taking the engine apart for inspect you could eliminate the possibility of the engine sludge issue by cleaning the oil system and using an additive. We use engine oil cleaner then the engine tune up from Justice Brothers. They seem to work very well for us. You need to add the cleaner then run the engine for ten minutes, change the oil, and then add the engine tune up. If it's not an excessive wear issue this should help. You may need to repeat the process down the road if it occurs again.

Take care, the Motor Medics.
