Ask the Motor Medics®

Automotive Advice from The Under the Hood® Show

Dear Motor Medics,
I have a 2004 GMC Yukon and I'm having a 4x4 problem. The system will work one time then not the next. When I take it to the shop it seems to be the time that it is working correctly. The problem it has is when I switch to 4x4 high the light just blinks then is stays in the 2wd position. Sometimes when I switch to low 4x4 then back to high it will work just fine until I put it back in the 2wd position.

Jack in Charleston West Virginia

Dear Jack,
Problems with systems that seem to always work when you have it in the shop are as big a pain for the mechanics as it is for you as the driver. The systems have computers that can often give codes which can help with the diagnostics, but they don't always indicate the exact cause and without the system failed at the moment it's being inspected makes it hard to diagnose and confirm repairs. The most often found issue we see when a 4x4 system in a GM truck of your model year fails like this is a failed shift motor or shift module. Both parts can be expensive so if you can get it to happen while at a shop so they can give a 100% accurate diagnosis it will go a long way to helping you save money and get it repaired right on the first visit.

Take care, the Motor Medics.

Dear Motor Medics,
I m a long time Under the Hood listener and I want to thank you for the great advice you guys give. I have a problem with my headlights. I drive a 2007 Chevy Impala and when I'm driving my headlights sometimes just shut off by themselves. If I pull the headlight switch out, they stay off but switching to the high beams does work but only for about two minutes then they start to blink and fail too. I tried a switch that I installed myself and It did not help.

Steven in Lindsay Oklahoma.

Dear Steven,
We have experienced headlight failure ourselves and it can be a scary thing. At least you have high beams so you can get off the road safely. This is actually becoming a common issue on this body style car. The headlight switches do fail quite often and your replacing of the switch may have been needed as well as the further repairs needed now. The switch connector needs to be checked during the installation of the switch. The pins in the connector tend to become burnt and fail due to high resistance and heat build-up. Make sure the pins are clean and in good shape and are not loose and replace any that are questionable. The pins can be found at a GM dealership parts department and the tool to install them at most auto parts stores. Also check your headlight socket connections.

Take care, the Motor Medics.
